EDUCATION

National University of Singapore

Bachelor of Science (Hons)

Aug 2024 - May 2028

- Primary Major Data Science and Analytics, Second Major Quantitative Finance

EXPERIENCE

ING Bank

Market Risk Management Intern

July 2026 - December 2026

- Execute risk reporting and monitoring of key market risk metrics such as Value-at-Risk (VaR), sensitivities in trading books, or interest rate risk, liquidity risk and FX exposures in banking books mainly covering linear rates, credits and consolidated risk
- Facilitate preparation of management and regulatory reports covering Trading risk or Treasury/ALM risk
- Track macroeconomic events and market movements to conduct portfolio stress testing in anticipation to global events
- Update Excel Macros for data analysis and automated risk report generation systems
- Stress test near term high volatility scenarios against current portfolio

Singapore Pools

Corporate Strategy Intern

December 2025 - January 2026

- Constructed a strategy paper on fantasy sports landscape and its relationship with illegal operators, assessing growth opportunities, market dynamics and relevance to Singapore
- Researched and scoped international market for fantasy sports and related operators
- Analysed consumer behaviours and trends to assess engagement and cross sell trends in space
- Assessed business models, revenue mechanisms and cross sell tactics to analyse exposure of fantasy players to illegal gambling

Vertex Holdings

Investment Intern

May 2025 - July 2025

- Pitched over 100 investment theses for different startups, with 20 advancing to due diligence and 2 brought before an investment committee
- Sourced and met over 150 startups across 3 continents, appraising fit within mandate
- Analysed over 50 startups across fields from quantum to coatings, evaluating investability within fund's preferences
- Designed prompts with man-hour savings of 72 hours a year to be used for tools developed to support investment functions of Vertex Holdings
- Conducted market entry research for portfolio companies considering entry into the Singapore market

Singapore Armed Forces

Admin Support Assistant (Logs, Finance and Data Analysis)

July 2022 - July 2024

- Saved over 104 man-hours yearly through automated processes eliminating manual data entry, cleaning and processing for manpower related analytics (Excel, Power Query, VBA)
- Set up first ASA platoon, specifically contributing to a framework allowing training of ASAs specialized in coding projects for the SAF
- Created an inventory management system deployed in 1 storeroom for handling logistics in and out flows while allowing system operators to account for current inventory amounts and requester to receive status updates on requested items (Excel)
- Programmed a Python Telegram bot to automate day-to-day manpower processes, relieving personnel of those responsibilities and saving resources projected to exceed 100 man-hours yearly.

Proctor and Gamble, National University of Singapore

Project Manager (AI Integrated Competitive Product analytics)

January 2026 - April 2026

- Led team of 8 to build an end to end AI-powered competitive intelligence platform combining autonomous agents with traditional statistical analysis pipelines for Proctor and Gamble
- Built SBERT classification model for relevance scoring, SQLAlchemy database for structured data storage, and autonomous GPT agent for classification
- Visualised insights through interactive dashboards, enabling real-time competitor tracking across full data pipeline from web scraped data to automated classification and cleaning to visualisation

Nanyang Technological University

Student Researcher

April 2020 - December 2020

- Received the Nanyang Research Program Silver Award for a paper on yttrium doping's effects on bismuth ferrite.
- Wrote a hypothesis and planned experiments to collect data on photosensitivity of Bismuth Ferrite
- Developed critical thinking skills through continuous problem-solving activities related to hypothesis testing or experiment design challenges faced during research projects
- Learned insights into semiconductor manufacturing and research

National University of Singapore

Project Manager (Exploration of Machine Learning Techniques in Predicting Transformer Temperature)

August 2025 - November 2025

- Led a team of 4 in researching machine learning techniques applicable to electrical transformer temperature.
- Built and tested a Temporal Convolutional Network and assisted with LSTM, XGBoost, and linear regression models.
- Evaluated efficacy of models comparing with frontier research to evaluate model strengths and weaknesses

National University of Singapore

Project Manager (Global Events Effects on UNGA votes)

August 2025 - November 2025

- Led team of 6 to conduct exploratory data analytics into how historical events influence voting patterns
- Created interactive visualizations breaking down how political leaning, location, alignment, and historical events might affect a country's position on global issues.

Independent

Pricing Profits of Pokemon Gambling using Monte Carlo Simulations

August 2025 - November 2025

- Applied Monte Carlo methods to simulate profit-and-loss states across different business decisions and player profiles.
- Created models to simulate business profit-and-loss states over any runtime.

Ministry of Education

Teaching Intern

January 2022 - March 2022

- Promoted a positive learning environment with clear expectations, consistent discipline, and effective classroom management techniques as a form and classroom tutor for over 100 students
- Enhanced students' understanding through creative activities and interactive teaching methods across 3 subject areas.
- Designed personalized lesson plans for different learning styles across 3 age groups, teaching scientific concepts through engaging activities and questions.
- Mentored and nurtured students over 50 from diverse socio-economic backgrounds to improve classroom environment and learning

Singapore Nuclear Research and Safety Institute

Student Researcher

December 2019 - January 2020

- Developed an understanding of the nuclear landscape and key challenges surrounding nuclear reactors
- Wrote a report on findings on simulator based on a test formulated to test reactor safety
- Developed skills in doing independent research with large freedom to decide research topic
